

SQA Take-Home Assessment – Test Summary Report

Tester: Mohamed Jahangeer Azeem Mohamed Husain

Role: Summer Intern – SQA

App Tested: TickTick: To Do List & Calendar (Latest Version)

Platform: Android

Date: 14 June 2026

1. App Overview

TickTick is a feature-rich task management application available on Android. It offers multiple views and modules including a Task List, Calendar, Eisenhower Matrix, Pomodoro Timer, Habit Tracker, and Countdown. The app supports Google and Email-based sign-in, voice input for task creation, subtasks, tags, filters, and a dedicated Search tab.

This app was selected for testing because it has clearly defined workflows, a broad feature set, and sufficient complexity to perform meaningful functional, usability, and edge case testing.

2. Test Scope

ATTRIBUTE	DETAILS
TOTAL TEST CASES EXECUTED	32
CORE FEATURES TESTED	Sign-in, Task Creation & Management, Subtasks, Calendar, Eisenhower Matrix, Pomodoro, Habit Tracker, Countdown, Search & Filter, Settings, Navigation, Voice Input, Dark Mode
TEST TYPES	Functional, Usability, Edge Case, Negative Scenarios
BUGS FOUND	7

ATTRIBUTE	DETAILS
BUG SCREENSHOTS	Attached (BUG-01 to BUG-07)

3. Test Execution Summary

TOTAL TEST CASES	PASSED	FAILED	PASS RATE
32	25	7	78.13%

4. Test Cases – Result Overview

TC ID	TITLE	STATUS
TC_01	Sign in with Google Account	Pass
TC_02	Sign in with Email	Pass
TC_03	Create Simple Task	Pass
TC_04	Mark Task as Completed	Pass
TC_05	Move Completed Task back to Pending	Pass
TC_06	Edit an Existing Task	Pass
TC_07	Delete a Task	Pass
TC_08	Add Subtasks	Pass
TC_09	Navigation Between Main Views	Pass
TC_10	Switch Between Kanban and List View	Pass

TC ID	TITLE	STATUS
TC_11	Verify Tasks Appear in Calendar	Pass
TC_12	Drag & Drop in Eisenhower Matrix	Pass
TC_13	Add Task Directly in Eisenhower Matrix	Pass
TC_14	Test Stopwatch in Pomodoro	Pass
TC_15	Test Pomo Timer in Pomodoro	Pass
TC_16	Add New Habit	Pass
TC_17	Mark Habit as Completed	Pass
TC_18	Delete Habit	Fail
TC_19	Add Item in Countdown Tab	Pass
TC_20	Search Tasks Using Keywords	Pass
TC_21	Sign Out from App	Pass
TC_22	Add Task Using Voice Input	Pass
TC_23	Add Task with Empty Fields	Pass
TC_24	Add Task Without Title	Fail
TC_25	Change Task Priority	Pass
TC_26	Change Group By / Sort	Pass
TC_27	Switch to Dark Mode	Pass
TC_28	Tab Icons Clarity	Fail
TC_29	Delete Task Confirmation Dialog	Fail

TC ID	TITLE	STATUS
TC_30	Search & Filter Usability	Fail
TC_31	Duplicate Tasks with Same Title & Date	Fail
TC_32	Past Due Dates Allowed During Task Creation	Fail

5. Bug Report – Key Findings

BUG-01 | No Delete Option Available for Habits

- **Severity:** Medium
- **Linked Test Case:** TC_18
- **Description:** When a user tries to delete a habit by long-pressing or exploring the habit options, no delete or remove option is available anywhere in the Habit tab.
- **Expected:** User should be able to delete or archive a habit they no longer need.
- **Actual:** No delete option exists for habits. The only options visible are to mark it as complete or skip for the day.
- **Screenshot:** BUG-01.jpeg

BUG-02 | Task Can Be Saved Without a Title

- **Severity:** High
- **Linked Test Case:** TC_24
- **Description:** When creating a new task, the user is able to leave the title field completely blank and still save the task. The task appears in the list as "No Title."
- **Expected:** The app should validate that a title is required and prevent saving a task without one.
- **Actual:** Task is saved with the placeholder "No Title," leading to confusion in the task list.

- **Screenshot:** BUG-02.jpeg

BUG-03 | Unclear and Ambiguous Bottom Navigation Icons

- **Severity:** Medium
- **Linked Test Case:** TC_28
- **Description:** The bottom navigation bar icons are not self-explanatory. Icons for the Eisenhower Matrix, Pomodoro, and other tabs do not have visible labels. A new user has no way to understand which tab performs which function without tapping each one individually.
- **Expected:** Icons should be clearly recognizable or accompanied by labels so users can identify tabs at a glance.
- **Actual:** Icons are visually ambiguous. Users must tap each icon to understand its purpose.
- **Screenshot:** BUG-03.jpeg

BUG-04 | No Confirmation Dialog When Deleting a Task

- **Severity:** High
- **Linked Test Case:** TC_29
- **Description:** When the user deletes a task through a long press and selecting the delete option, the task is immediately and permanently removed with no confirmation prompt or undo option.
- **Expected:** The app should show a confirmation dialog (e.g., "Are you sure you want to delete this task?") to prevent accidental data loss.
- **Actual:** Task is deleted instantly without any warning, confirmation, or undo mechanism.
- **Screenshot:** BUG-04.jpeg

BUG-05 | Confusing Search Tab and Filter UX

- **Severity:** Medium
- **Linked Test Case:** TC_30

- **Description:** The Search tab is a separate standalone tab in the bottom navigation, which is an unusual design choice. Within the search results, multiple filter chips appear (Task, Inbox, With Tags, This Month, etc.) that are not clearly labeled or intuitive. The search functionality works but the overall UX creates unnecessary confusion.
- **Expected:** Search should be integrated naturally within the main task view or clearly organized with simple, labeled filters.
- **Actual:** A separate Search tab with unclear filter chips creates a confusing and unintuitive search experience.
- **Screenshot:** BUG-05.jpeg

BUG-06 | Duplicate Tasks with Same Title and Date Are Allowed

- **Severity:** Medium
- **Linked Test Case:** TC_31
- **Description:** The app allows users to create multiple tasks with the exact same title and the same due date (e.g., two tasks both named "hello how are you" both due Today). There is no duplicate detection or warning.
- **Expected:** The app should warn the user if a task with the same title and date already exists, or at minimum prevent exact duplicates.
- **Actual:** Duplicate tasks are created silently, leading to a cluttered and confusing task list.
- **Screenshot:** BUG-06.jpeg

BUG-07 | Past Due Dates Are Allowed During Task Creation

- **Severity:** Medium
- **Linked Test Case:** TC_32
- **Description:** When creating a new task, the user can freely set a due date in the past (e.g., 8 June at 22:00 when the current date is 14 June). The task is accepted and immediately appears in the Overdue section.
- **Expected:** The app should warn the user when selecting a past date (e.g., "This date has already passed. Are you sure?") to prevent accidental scheduling errors.

- **Actual:** No warning is shown. Task is saved with a past date and is immediately flagged as overdue, with no user awareness during creation.
 - **Screenshot:** BUG-07.jpeg
-

6. UX Observations and Additional Issues

Beyond the formal test cases, the following UX issues were observed during exploratory testing:

6.1 "Eisenhower Matrix" Tab Name is Too Technical

The tab label "Eisenhower Matrix" is unfamiliar to average users and does not clearly communicate its purpose. For a general productivity app, this terminology is too advanced and may confuse or alienate users who are not familiar with productivity frameworks. A simpler label such as "Priority Grid" or "Task Quadrant" would significantly improve discoverability and ease of use.

6.2 Feature Overload – Too Many Tabs and Buttons for New Users

The app includes a large number of features: Tasks, Calendar, Eisenhower Matrix, Pomodoro, Habit Tracker, Countdown, Search, and Settings — all accessible from the bottom navigation. Combined with in-task options like Pin, Share, Won't Do, Add Subtask, Link Parent Task, Start Focus, Convert to Note, Attachment, Tags, Task Activities, and More, the interface feels overwhelming for new or casual users. This reduces clarity and increases the learning curve unnecessarily.

6.3 Inconsistent Drag Gesture Behavior

The app uses swipe/drag gestures for different actions across different sections, but the direction and behavior are inconsistent. For example, dragging a task to the right marks it as complete, while in the Habit tab, dragging works differently. There are also left-swipe and right-swipe interactions in some tabs that are not visually indicated or documented. This inconsistency makes the app harder to learn and can lead to accidental actions.

7. Usability Feedback

Positive Observations

- Navigation between main views is smooth and responsive.
- Calendar integration works correctly — tasks appear on the right dates.
- Voice input for task creation is a useful feature (minor delay observed).
- Dark Mode is well implemented with good contrast.
- Drag-and-drop in the Eisenhower Matrix works accurately.

Areas Requiring Improvement

- Input validation is missing for the task title field.
- Destructive actions (task deletion) lack confirmation dialogs.
- Icon design and labeling in the bottom navigation is insufficient.
- Search is functional but UX needs simplification.
- Feature density is too high for first-time users.
- Gesture-based interactions need clearer visual cues or documentation.

8. Suggestions for Improvement

1. **Make Task Title Mandatory:** Implement validation that prevents saving a task without a title and shows a clear inline error message.
2. **Add Confirmation Dialogs for Destructive Actions:** Show a confirmation pop-up before deleting tasks or removing habits. Consider adding an undo/snackbar option after deletion.
3. **Rename "Eisenhower Matrix" to a Simpler Label:** Use a user-friendly name like "Priority Grid" so that new users can immediately understand the purpose of the tab.
4. **Add Labels to Bottom Navigation Icons:** Display text labels beneath each icon so users do not have to guess or click to discover what each tab does.
5. **Warn Users When Selecting Past Due Dates:** Show a warning or confirmation message when a user selects a date in the past during task creation.

6. **Add Duplicate Task Detection:** Warn users when they attempt to create a task with an identical title and due date to an existing one.
7. **Add a Delete Option for Habits:** Allow users to permanently delete habits, not just complete or skip them. Consider an archive option as well.
8. **Simplify the Feature Set for New Users:** Consider an onboarding flow or a "simplified mode" that hides advanced features (Eisenhower Matrix, Countdown, etc.) until the user explicitly enables them.
9. **Standardize Gesture Interactions:** Document and make consistent the drag and swipe behaviors across all sections of the app. Add visual indicators (e.g., hint arrows) for swipe actions.
10. **Integrate Search into Main Task Tab:** Remove the separate Search tab and integrate search as a search bar within the Task view to reduce navigation steps and confusion.

9. Automation Suggestion

The following flows are good candidates for automation using **Appium (Android)**:

- Task creation (with and without title) — covers validation testing
- Task editing and deletion flows
- Habit creation and completion
- Sign-in with Google and Email
- Search and filter behavior

These flows are repetitive, well-defined, and stable, making them ideal for regression testing through an automated suite.

10. Conclusion

Overall, TickTick is a functionally capable task management app with a solid feature set. The core workflows — task creation, editing, completion, and calendar integration — work reliably. However, the app has notable gaps in

input validation, destructive action confirmation, and usability for new users. The 7 bugs identified in this assessment range from high severity (missing title validation, no delete confirmation) to medium severity (icon clarity, past date handling, duplicates, habit deletion, search UX).

Addressing these issues would significantly improve the app's reliability, safety, and overall user experience.

Report prepared as part of SQA Take-Home Assessment – Summer Internship 2026
